Master Syllabus

DEH 1303 - Lab for Dental Hygiene Instrumentation II

Division: Health Sciences

Department: Dental Health Sciences

Credit Hour Total: 0.0

Other Prerequisite(s): Restricted to Majors

Date Revised: October 2013

Course Description:

General Education Outcomes:

- Critical Thinking/Problem Solving Competency
- Oral Communication Competency

Course Outcomes:

Dental Hygiene Care Plans
Develop dental hygiene care plans for the preventative oral prophlaxis, periodontal debridement, and periodontal maintenance patient and demonstrate the proper clinical processes for completing the patient.

Assessment Method: Locally developed exams
Performance Criteria: 70% or higher on examination

Instrumentation
Demonstrate the appropriate use of the various dental hygiene instruments for periodontal debridement and the techniques for sharpening.

Assessment Method: Performance appraisals
Performance Criteria: 80% or higher on skills assessments

Extrinsic Stain and Plaque Removal
Demonstrate the procedures of extrinsic stain and plaque removal using a slow-speed handpiece.

Assessment Method: Performance appraisals
Performance Criteria: 80% or higher on skills assessment

Topical Fluoride Application
Provide a rationale for and demonstrate the procedure for professional application of various topical fluorides.

Assessment Method: Performance appraisals
Performance Criteria: 80% or higher on skills assessment

Clinical Processes
Demonstrate the process of completing all dental hygiene assessments, form completions and dental hygiene treatment procedures on a patient.

Assessment Method: Performance appraisals
Performance Criteria: 80% or higher on each CES/CAM category

Outline:

Dental hygiene care plans
Application of periodontal debridement
Instrument sharpening
Procedures of extrinsic stain and plaque removal
Procedures of various topical fluroide applications
Clinical processes
Care of the removable prosthesis
